

City of Jacksonville Beach Water Meter Replacement Project

As part of our effort to consistently provide quality services for our residents, the City of Jacksonville Beach is undertaking a **WATER** meter replacement project. This technology will help us serve you better by providing enhanced customer service, leak detection, automated meter readings and billing accuracy. All **WATER** meters will be replaced in the City of Jacksonville Beach and the project is to be completed within 12 months. The water meter replacement will take approximately one (1) hour to complete, during which time your water service will be interrupted. Every customer will receive a door hanger before their meter is exchanged and it will include a phone number to contact with questions or concerns.

All installation vehicles will be identified by signage pictured to the left. Every installer will carry a picture identification card that identifies them as a Utility Metering Solutions (UMS) or Johnson Controls, Inc. (JCI) employee.
